AmbiDim Creates The Perfect Scene

Vimark

IP65 Integrated LED Fire Rated Downlights

Ambient Lighting

Advanced AmbiDim technology enables a relaxed and ambient lighting atmosphere to be created, providing a warmer lighting tone (3000K to 2200K) as light levels are reduced, replicating the effect of traditional incandescent and halogen lamps.

Compact & Versatile

At only 50mm tall and with an IC-F rated construction, these fittings are perfect for use within shallow ceiling voids and allow insulation to be laid directly over the top of the fittings.

Easy to Install

Featuring a large screwless loop-in loop-out terminal block, simplifying and keeping installation time to a minimum; a remote driver avoiding the risk of overheating, preserving the life of the driver; an inline connector allowing first fix to be completed prior to decoration with a simple plug in connection to be made at second fix.

Twist & Lock Bezels

White bezel supplied as standard. Chrome and Stainless Steel bezels are available as separate accessories allowing fittings to be customised to complement any décor.
