

COMPLETE CONTROL OVER YOUR HEATING WITH WIFI DIRECT

Did you know that most of the “connected” or “WiFi” heating products on the market are not really connected at all? Unlike the WiFi Direct system - exclusive to Rointe - the vast majority require expensive external devices that must be installed next to or with your router.

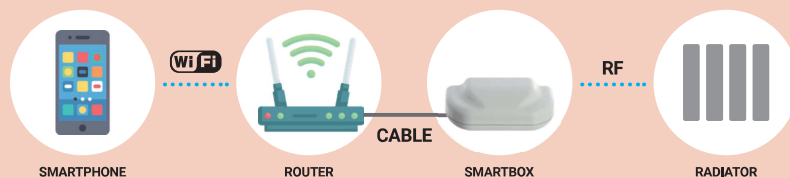

Rointe **Wi Fi** DIRECT

The products connect directly to the router without intermediate gateways, allowing higher data transmission speeds and eliminating any limits on the number of connected devices. Communications are encrypted, ensuring the integrity and security of the exchanged data. In addition, no additional configuration is required on the user's router.

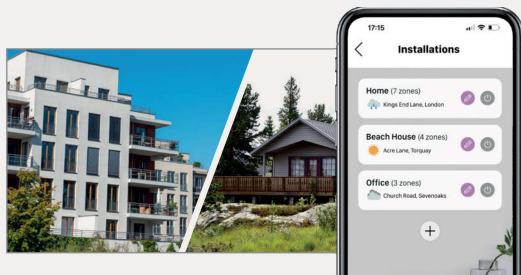

Other “connected” systems via a gateway

These products are connected via radio frequency to a **switchboard or smartbox** (which is usually limited to 8 connected products on average). To obtain a “WiFi” connection, the control unit must be connected by cable to the router, which must be configured so that the connection between the App and the products is fluid. It is important to note that these “gateways” must be purchased separately at a price of around £80, a hidden cost which increases the final price of the product.

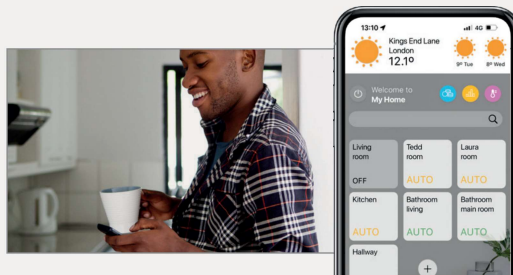

COMFORT CONNECTED TO YOUR SMARTPHONE

Choosing Rointe's connected heating system allows you to have complete control of the entire installation in the palm of your hand. Thanks to the Rointe Connect app, the smartphone works as a switchboard remotely connected via WiFi to all the products in the installation, making it easy to control and manage all the devices, as well as monitor their consumption.

Multi-installation management

With the Rointe Connect App, you can **create as many installations as you need**, in an unlimited way and control them from a single point.

Unlimited zones and sub-zones

The same as installations, zones/sub-zones and rooms can be created without any limits for you to **choose your optimum layout**.

NEW

Quick and easy pairing

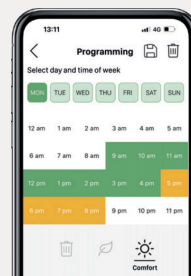

Rointe's connected products incorporate BLE technology¹ to make the **pairing and device control processes more efficient and simple**, providing greater reliability even in situations where WiFi connections are not necessary or accessible. The product is now responsible for reading the WiFi networks within its reach and sending them to the app, ensuring a reliable and secure pairing process.

¹ As of firmware version v2.5.0.

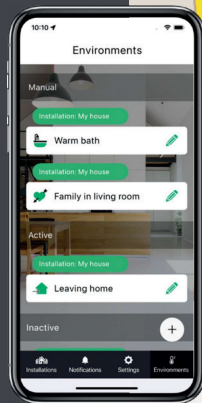

24/7 programming

Program your products with **just 3 clicks** to make them work autonomously.

AUTOMATE YOUR HEATING SYSTEM

Operate your heating system by creating manual and/or automatic scenarios, controlled by the **GPS geolocation** of your **smartphone**. Using the scenarios, you can group different actions that your products will **perform automatically at specific times**, such as switching on or off when you move away from or towards your home.

Forget about remembering to switch products on and off. With GPS environments you can automate their operation, turning them off when you leave and turning them on when you return.

works with

Hey Google

Control via **voice commands**

The free and exclusive Rointe Connect App is 100% compatible with Google Assistant and Amazon Alexa.

With Amazon Alexa and Google Assistant, there is no need to approach the products or the control panel. Using voice commands, you can control your connected heating system remotely, both inside and outside the home.

Examples:

"Alexa, open Rointe and turn on the heating in the living room."

"Ok Google, put the living room radiator in comfort mode."

Hey Google, turn on the towel rail in the bathroom.

OK, I turn on the towel rail in the main bathroom.
